                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;
                                                                                                                           protein K (see AWV2391) of Arabidopsis thallana. LSD1 interacting genes (see AAV6755-67) were isolated from a yeast gene expression library constructed in plasmid puG4-5 using RNA from Arabidopsis leaves infected with Pseudomonas syringae. A two-hybrid system was used with LSD1 short and long open reading frames (see AAV66750-51) as bait. LSD1 (see AAW72366-67) is a novel polypeptide that regulates the initial response of plants to pathogens and the subsequent spread of plant cell death engendered by infection. Because the inactivation of LSD1 by mutation leads to enhanced disease resistance, LSD1 partner proteins represent novel targets for engineering plants with enhanced resistance to pathogens. Thus, the invention includes all proteins (see AAW72384-96) that interact with the cell death regulator LSD1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             210 atgtgggagtagagtgcattatattgtttgctgggactgacaggattgcctagcctata 269

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A;Title: Leishmania major Friedlin chromosome 1 has an unusual distribution of protein-A;Reference number: A81455; MIID:99178987
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               probable meliblose carrier protein yagG - Escherichia coli
N.Alternate names: probable membrane protein yagG
Species: Escherichia coli
C.Date: 12-Sep-1997 #sequence_revision 17-Sep-1997 #text_change 20-Aug-1999
C.Accession: F64752
C.Bate: 12-Sep-1997 #sequence_revision 17-Sep-1997 #text_change 20-Aug-1999
C.Accession: F64752

CONSTITUTIVE SECRETORY PARHWAY, WITH UNIQUE RESTRICTED
DISTRIBUTION: LIKELY TO REPRESENT AN ENDOPROFEASE ACTIVITY WITHIN THE
CONSTITUTIVE SECRETORY PARHWAY, WITH UNIQUE RESTRICTED
DISTRIBUTION IN BOTH NEUROENDOCRINE AND NON-NEUROENDOCRINE TISSUES
AND CAPABLE OF CLEAVAGE AT THE RX(K/R)R CONSENGIS MOTIF.

-!- CATALYTIC ACTIVITY: RELEASE OF MATURE PROTEINS FROM THEIR
PROPROTEINS BY CLEAVAGE OF ARG-XAA-YAA-ARG-!-ZAA BONDS,
WHERE XAA CAN BE ANY AMINO ACID AND YAA IS ARG OR LYS.
-!- COFACTOR: PACEAA IS PROBABLY CALCIUM-DEPRENDET.

-!- SUBUNIT: THE PACEAA-I PRECURSOR PROTEIN SEEMS TO EXIST IN THE
RETICULUM ENDOPLASMIC AS BOTH A MONOMER AND A DIMER-SIZED COMPLEX
WHERERS MATURE PACEAA-I EXISTS ONLY AS A MONOMER, SUGGESTING THAT
PROPEDILIDE CLEAVAGE AFFECTS ITS TERTIARY OR QUATERNARY STRUCTURE.

-!- SUBCELLULAR LOCATION: PACEAA-I AND PACEA AIL ARE SECRETED.

-!- SUBCELLULARLY PROBABLY THROUGH A HYDROPHOBIC CLUSTER IN THEIR C-
INTRACELLULARLY PROBABLY THROUGH A HYDROPHOBIC CLUSTER IN THEIR C-
INTRACELLULARLY PROBABLY THROUGH A HYDROPHOBIC CLUSTER IN THEIR C-

CS AND MICH BE ENZYMATICALLY INACTIVE.

TISSUE SPECIFICITY: EACH PACE4 ISOFORM EXHIBITS A UNIQUE
RESTRICTED DISTRIBUTION. PACE4A: II SE EXPRESSED IN HEART, BRAIN,
PLACENTA, LUNG, SKELETAL MUSCLES, KIDNEY, PANCREAS, BUT AT
COMPARATIVELY HIGHER LEVELS IN THE LIVER. PACE4A-II IS AT LEAST
EXPRESSED IN PLACENTA. PACE4B WAS ONLY FOUND IN THE EMBRYONIC
KIDNEY CELL LINE FROM WHICH IT WAS ISOLATED. PACE4C AND PACE4D ARE
PLACENTA AND PITUITARY. PACE4E-II IS EXPRESSED IN CEREBELLUM,
TISSUB-Cerebellum;

-!- FUNCTION: BINDING TO CELLS VIA A HIGH AFFINITY RECEPTOR, LAMININ IS THOUGHT TO MEDIATE THE ATACHMENT, MIGRATION, & ORGANIZATION OF CELLS INTO TISSUES DURING EMBRYONIC DEVELOPMENT BY INTERACTING WITH OTHER EXTRACELLULAR MATRIX COMPONENTS.
-!- SUBDINIT: LAMININ IS A COMPLEX GIYCOPROTEIN, CONSISTING OF THREE DIFFERENT POLYPEPTIDE CHAINS (ALPHA, BETA, GAMMA), WHICH ARE BOUND TO EACH OTHER BY DISJUETED BONDS INTO A CROSS-SHAPED MOLECULE COMPRISING ONE LONG & THREE SHORT ARMS WITH GLOBULES AT EACH END. THE ALPHA-1 CHAIN IS A SUBUNIT OF LAMININ-1 (EHS LAMININ) AND LAMININ-3 (S-LAMININ).
-!- SUBCELLULAR LOCATION: EXTRACEllular.
-!- TISSUE SPECIFICITY: FOUND IN THE BASEMENT MEMBRANES (MAJOR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  COMPLONENT: THE ALPHA-HELLCAL DOMAINS I AND II ARE THOUGHT TO INTERACT WITH OTHER LAMININ CHAINS TO FORM A COILED COIL STRUCTURE.

SIMILARITY: CONTAINS I LAMININ N-FERMINAL DOMAIN (DOMAIN VI).

SIMILARITY: CONTAINS I LAMININ N-FERMINAL DOMAIN (DOMAIN VI).

SIMILARITY: CONTAINS 2 LAMININ DOMAINS IV.

SIMILARITY: CONTAINS 2 LAMININ DOMAINS IV.

RECEPTOR FOR ANGIOPOIETIN 1. IT MAY CONSTITUTE THE EARLIEST
MAMMALIAN ENOOTHELIAL CELL LINEAGE MARKER. PROBABLY REGULATES
ENOOTHELIAL CELL PROLIFERATION, DIFFERENTIATION AND GUIDES THE
PROPER PATTERNING OF ENDOTHELIAL CELLS DURING BLOOD VESSEL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -i- CATALYTIC ACTIVITY: ATP + a protein tyrosine - ADP + protein tyrosine phosphate.
-i- SUBCELLIALIDAR LOCATION: Type I membrane protein.
-i- TISSUE SPECIFICITY: SPECIFICALLY EXPRESSED IN DEVELOPING VASCULAR ENDOTHELIAL CELLS.

CC --- SUBBONIT: LAMININ IS A COMPLEX GLYCOPROTEIN, CONSISTING OF THREE DIFFERENT POLYPEPTIDE CHAINS (ALPHA, BETA, GAMMA), WHICH ARE BOUND CC TO EACH OTHER BY DISCULFIDE BONDS INTO A CROSS-SHAPED MOLECULE COMPRISING ONE LONG & THREE SHORT ARMS WITH GLOBULES AT EACH END.

CC --- SUBCELLULAR LOCATION: EXTRACELLULAR; FOUND IN THE BASEMENT MEMBRANES (MAADOR COMPONENT).

CC --- TISSUE SPECIFICITY: NEWLY FORMED MESODERM AND LATER PROMINENTLY EXPRESSED IN HEMOCYTES, WHICH ALSO SYNHHESIZE COLLAGEN IV.

CC --- DEVELOPMENTAL STAGE: DURING MORPHOGENESIS, MOSTLY IN EMBRYO

CC --- DEVELOPMENTAL STAGE: DURING MORPHOGENESIS, MOSTLY IN EMBRYO

CC --- DOMAIN: THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT

WITH OTHER LAMININ CHAINS TO FORM A COLLED COLL STRUCTURE.

CC --- SIMILARITY: CONTAINS 1 LAMININ N-TERMINAL DOMAIN VI).

CC --- SIMILARITY: CONTAINS 1 LAMININ DOMAIN IV (DOMAIN IV' IS NOT SIMILARITY: CONTAINS 5 LAMININ DOMAIN IV).

CC --- SIMILARITY: CONTAINS 5 LAMININ G-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright. J. Blol. Chem. 274:1366-1374(1999)
J. FUNCTION: INTEGRIN ALPHA-V/BETA-5 IS A RECEPTOR FOR FIBRONECTIN.
IT RECOGNIZES THE SEQUENCE F.G-D IT ITS LIGAND.
-1- SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA SUBUNIT. BETA-5
                                                                           ASSOCIATES WITH ALPHA V.
SUBCELLULAR LOCATION: Type I membrane protein.
ALTERNATIVE PRODUCTS: 2 ISOFORMS; BETA-5A (SHOWN HERE) AND BETA-5B; ARE PRODUCED BY ALTERNATIVE SPLICING.
SIMILARITY: BELONGS TO THE INTECRIN BETA CHAIN FAMILY.
SIMILARITY: CONTAINS I VWFA-LIKE DOMAIN.
                                                                                                                                                                                                                                                                                                                           SIMILARITY.

Thinan laminin: cloning and sequence analysis of cDNAs encoding A, Bl
Atim and cultured cells.;
Atim and cultured cells.;
Lab. Invest. 60:77-782(1989).
CI-FUNCTION: BINDING TO CELLS VIA A HIGH AFFINITY RECEPTOR, LAMININ OF
CELLS INTO TISSUES DURING EMBRYONIC DEVELOPMENT BY INTERACTING
WITH OTHER EXTRACELLULAR MATRIX COMPONENTS.
CI-SUBUNIT: LAMININ IS A COMPLEX GLYCOPROTEIN, CONSISTING OF THREE
COMPRISING ONE LONG & THREE SHORY ARMS WITH GLOBULES AT EACH BND.
TO EACH OTHER BY DISCULPIDE BNDS INTO A CROSS-SHAPED MOLECULE
COMPRISING ONE LONG & THREE SHORY ARMS WITH GLOBULES AT EACH BND.
THE ALPHA-1 CHAIN IS A SUBUNIT OF LAMININ-1 (EHS LAMININ) AND

DOMAIN: THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT WITH OTHER LAMININ CHAINS TO FORM A COILED COIL STRUCTURE.

DOMAIN: DOMAINS VI, IV AND G ARE GLOBULAR.

SIMILARITY: CONTAINS 1 LAMININ N-TERMINAL DOMAIN (DOMAIN VI).

SIMILARITY: CONTAINS 17 LAMININ BGF-LIKE DOMAINS.

SIMILARITY: CONTAINS 2 LAMININ DOMAINS IV.

SIMILARITY: CONTAINS 5 LAMININ G-LIKE DOMAINS.

SUBCELLUIAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: PREDOMINATLY EXPRESSED IN ENDOTHELIAL CELLS
AND THEIR PROGENITORS, THE ANGIOBLASTS. HAS BEEN DIRECTLY FOUND
IN PLACENTA AND LUNG, WITH A LOWER LEVEL IN UMBILICAL VEIN
ENDOTHELIAL CELLS, BRAIN AND KIDNEY.
DISEASE: DEFECTS IN TEK ARE A CAUSE OF DOMINANTLY INHERITED VENOUS
MALFORMATIONS (VMCM1), AN ERROR OF VASCULAR MORPHOGENESIS
CHARACTERIZED BY DILATED, SERPICINOUS CHANNELS.
SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATALYTIC
                                                                                                                                                                                                                                                                                                                        MEDLINE-97134665; PubMed-8980225; Vikkula M., Boon L.M., Carraway K.L.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               4-JUL-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8-JUN-
  \frac{1}{2}
                                                                                                                                                                                                                                                                                                                                                         4
                                                                                                                       This is the amino acid sequence of LSD1-interacting protein K of Arabidopsis thaliana. LSD1 interacting genes (see AAV66755-67) were isolated from a yeast gene expression library constructed in plasmid pdG4-5 using RNA from Arabidopsis leaves infected with Pseudomonas syringae. A two-hybrid system was used with LSD1 short and long open reading frames (see AAV66750-51) as bait. LSD1 (see AAW72366-67) is a novel polypeptide that regulates the initial response of plants to pathogens and the subsequent spread of plant cell death engendered by infection. Since the inactivation of LSD1 by mutation leads to enhanced disease resistance, LSD1 partner proteins represent novel targets for engineering plants with enhanced resistance to pathogens. Thus, the invention includes all proteins (see AAW72384-96) that interact with the cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter;
